THE STRUCTURE OF MEDITERRANEAN DEPRESSIONS MOVING ACROSS THE BLACK SEA. 6 June 60.
20p. (21 figs. omitted) 9 refs. Trans. no. 50; M1926.
Order from LC or SLA mi\$2.40, ph\$3.30 61-13310

Trans. of Akademiya Nauk SSSR. Mor[skiy]
Gidrofiz[ichekiy] Inst[itut]. Trudy, 1959, v. 15,
p. 144-166.

The depth of the Mediterranean depressions, passing over the Black Sea, for the greater part is equal to 2-3 km. These are usually low, warm depressions, which are given on the 700-mb-contour chart as a trough and only sometimes as a closed isohypse. In all instances (except when the depression passes along the south of the Black Sea) a change of air-masses takes place. The change of air-masses is observed up to an altitude of 2-3 km. When the cyclone passes to the south of the Black Sea, the Crimea usually remains in the same air mass, which is on the northern periphery of the depression. (Author)
